

Claude as Foundation

This isn't about using a tool. It's about how you think.

"Thirteen weeks. One shift in how you work."

13

THE PROBLEM

Most people use Claude like a search engine. That's the smallest version of it.

When you type a question into Claude expecting a clean answer, you're using it the same way you'd use Google — just with a sentence instead of keywords. You get something back. You copy it. You move on. Nothing changes.

That's not wrong. But it misses what Claude actually is.

After thirteen weeks of these kits — prompts for writing, studying, planning, hard conversations, building businesses — the pattern is the same every time: Claude is most useful when you bring it your real thinking, not when you ask it to replace your thinking.

The people who get the most out of Claude aren't the ones who ask it to write for them. They're the ones who write a rough draft, share it, and ask: 'What am I missing?' They stay in the conversation long enough to work through it.

That's augmentation, not automation. That's thinking with a partner, not delegating to a machine. That shift is what this kit is about.

THE PROMPT

Your Template

This isn't a template for one task. It's the prompt behind every prompt — the mindset that makes Claude most useful. Use it whenever you're stuck, uncertain, or working through something that doesn't have an obvious answer.

PROMPT

Here's what I'm working on: [describe your project, problem, or question – real context, not a summary].

Here's where I'm stuck: [be specific about what part you can't get past].

I don't want you to solve it. I want you to help me think through it.

What questions should I be asking myself right now?

Three things that hold across every kit.

1. Real context beats vague questions — every time.

Claude's best responses come when you give it specifics. Not 'help me write something' but 'here's the draft, here's who it's for, here's what feels off.' The prompt is an invitation. What you bring to it determines what you get back.

2. The prompt is never the end of the conversation.

Every kit in this series was designed to start a conversation, not finish one. The first response from Claude is a beginning. You push back. You ask it to go harder, softer, simpler, deeper. You stay in the conversation. That's where the real value is.

3. You are still the decision-maker.

Claude is a thinking partner, not an authority. It makes mistakes. It has blind spots. It reflects what you give it. Your judgment, your context, your values — these are irreplaceable. Claude helps you think better. What you do with that thinking is yours.

WHAT'S NEXT

Keep the habit.

One conversation with Claude per day is more valuable than a course. Not a polished prompt — a real question, a real problem, a real thing you're working through. That's the habit that compounds.

Ejoshi publishes a new free kit every week. Each one is a single prompt, a real example, and a clear action. No paywall. No course to buy. Just practical prompts that work in your real life.

- Find every kit at ejoshi.ai/resources — free, always.
- The Ejoshi Family animated series is coming — AI literacy for the whole family, built around real moments, real questions, and a wise owl who makes it all make sense.
- Share these kits. If one helped you, pass it on. Someone in your circle is sitting in front of Claude right now, not knowing where to start.

Thank you for thirteen weeks. The kits continue. So does the work.
