

# Set Up Claude for Your Family

A first-time intro you do together.

---

**Your kids are already curious about AI. Here's how to make that a good thing.**

FOR: PARENTS · FAMILIES · ANYONE INTRODUCING AI AT HOME

**Ejoshi**

# AI Is Already in Your House. Are You in the Conversation?

AI isn't coming. It's already there. Your kids have heard about it at school. They've probably already tried it. Some of them use it every day. The question isn't whether AI enters your family's life — it's whether you're there when it does.

A lot of parents feel caught between two things: not wanting to block something their kids are curious about, and not knowing enough about AI to feel comfortable guiding them through it. So nothing happens. The kids use it however they want, and the parents stay out of it.

This kit gives you a different option. Instead of keeping AI at arm's length, you introduce it yourself — in a safe, honest way, with everyone in the room. You run a prompt together. You see how Claude responds. You talk about it. That's how you make AI a family conversation instead of a secret.

One prompt. Everyone in the room. That's the whole setup.

# The Family Intro Prompt

Run this prompt with your family — ideally with your kids in the room so you discover Claude together.

We're a family trying Claude for the first time together. My [child/teen] is curious about AI and I want to show them how it works in a healthy way.

Can you introduce yourself to both of us — explain what you are, what you're good at, what you're not good at, and give us one thing we could try together right now that would be genuinely useful?

## HOW TO RUN IT

- > **Replace [child/teen]** with whatever fits — child, teenager, kids, our family.
- > **Read Claude's answer out loud** if you can. It opens a real conversation about AI.
- > **Let your kids respond** to Claude directly. Watch what they ask. That tells you a lot.

---

# A Parent + Teenager, First Time

A parent and their teenager run the prompt together. They replace [child/teen] with "teenager" and hit send.

## CLAUDE INTRODUCES ITSELF:

"Hi to both of you. I'm Claude — an AI made by Anthropic. Here's the honest version: I'm good at explaining things, helping you think through problems, writing, brainstorming, and having real conversations.

I'm not good at telling you what's happening in the news right now, or anything that needs a live internet connection. I also make mistakes — so it's worth checking important things yourself.

One thing we could try together right now: tell me where you'd want to go on a family trip, your rough budget, and what you all enjoy — and I'll help you plan it."

## THE FAMILY TRIES THE TRIP IDEA:

They type: "We want to go somewhere warm. Budget around \$3,000 for four people. We like beaches and local food but hate tourist traps."

Claude gives back a real suggestion — with neighborhoods, timing, and food tips. The teenager starts asking follow-up questions. The conversation is real.

# This Week, Do It Together

1. Find a moment when the family is in the same room — after dinner, a weekend morning, wherever you have five minutes.
2. Open [claude.ai](#) on a laptop or tablet everyone can see. It's free.
3. Paste the prompt from page 3. Replace [child/teen] with whatever fits.
4. Read Claude's answer together. Try the suggestion it gives. See what your kids do with it.
