

Inside Ejoshi:

How We Build with Claude

A behind-the-scenes look at our real AI workflow.

"Everything you're reading, watching, and using from Ejoshi — Claude helped build it."

Ejoshi

ejoshi.ai · Free AI education for everyone

Everything you see from Ejoshi — the website, these kits, the social posts, the YouTube scripts, the Chinese translations — Claude touched at some point in the process. Not as a machine that generates finished things automatically. As a thinking partner that helps turn rough ideas into clear, useful content.

Here's what that actually looks like in practice. When a new idea comes up — a kit topic, a video concept, a page for the site — the first step isn't writing. It's thinking out loud with Claude. What is this for? Who is it for? What should someone feel after they read it? Claude asks questions that surface the things you haven't thought through yet. Then drafting starts. Claude suggests structure. It catches when something is unclear. It helps find the plain-language version of a complicated idea.

Claude also handles the work that used to require a full team: translating content into Chinese, checking that the brand voice is consistent, helping build the website, formatting documents. Not perfectly and not without oversight — every output gets a human review. But the gap between one person and a team has genuinely narrowed. That's the honest version of what AI can do for a small brand right now.

This is the prompt we use at Ejoshi when we're stuck on a project — not to get Claude to finish it, but to get unstuck and move forward. Try it on anything you're working on.

```
I'm working on [project or task]. Here's where I am:  
[describe what you have so far – even rough notes work].
```

```
I don't want you to finish it for me. I want you to:
```

1. Tell me what's missing or unclear in what I have
2. Ask me the 2-3 questions that would help me move forward
3. Give me one concrete next step

The key idea behind this prompt: use Claude to think, not to replace thinking. When Claude asks you questions, you're the one doing the work. That's the difference between a tool that makes you dependent and one that makes you sharper.

→ Your rough notes are enough. Claude works with fragments, not polished outlines.

→ The three-part request (missing + questions + next step) prevents Claude from doing too much at once.

→ After you answer Claude's questions, run the prompt again. You'll move further every round.

The situation: Planning a new YouTube video. Rough notes: *"something about why people are scared of AI."* That's it. Run the prompt.

CLAUDE'S THREE QUESTIONS

Question 1: Who is this video for specifically? Someone who has never tried AI, someone who has tried it and felt overwhelmed, or someone who actively avoids it because they've heard it's dangerous?

Question 2: What do you want someone to feel at the end — less scared, more curious, or actually ready to try something?

Question 3: What's one specific moment that changed your own mind about AI — something concrete you could open the video with?

Those three questions unlock the whole video. Suddenly you know the audience, the emotional arc, and the opening scene — from what was just a four-word idea. Claude didn't write the video. It helped you figure out what the video actually is.

YOUR TURN

Pick something you're working on this week — a project, a plan, a piece of writing, a decision you're sitting with. It doesn't need to be polished. Drop your rough notes into the prompt and see what Claude surfaces. The questions it asks will be the most useful thing you do today.

This works for creative projects, work tasks, business decisions, and personal goals. The rougher your starting point, the more valuable the questions become. Claude is best when you're least sure what you're making.
