

Build Your Personal Learning Plan with Claude

You don't need a course. You need a plan.

"The course you bought isn't the problem. The structure you skipped is."

THE PROBLEM

Adults quit learning not because they lose interest — because they lose structure.

You want to learn something. Maybe you've wanted to for years. You finally buy the course, or open the free resource, or download the app. You make it through the first two sessions. Then life happens. Two weeks later the tab is still open.

This isn't a motivation problem. Motivation got you to start. What's missing is structure — a weekly goal, a clear milestone, a way to know whether you're actually making progress or just going through the motions.

The traditional solution is a structured course. But structured courses are built for the average learner, at a fixed pace, toward a credential you might not need. You have a specific goal. A specific amount of time per week. A specific outcome in mind.

Claude builds the structure around you — your goal, your schedule, your level. In less than five minutes, you have a four-week plan with milestones you can actually check off. Not a course. A plan. Yours.

This kit shows you how to build it.

THE PROMPT

Your Template

Fill in three things: what you want to learn, how much time you have each week, and what you want to be able to do when you're done. Claude builds the rest.

PROMPT

I want to learn [skill or subject]. I can spend about [X hours per week] on this. I want to be able to [specific outcome – what you want to be able to do when you're done].

Please build me a 4-week learning plan with:

- A clear goal for each week
- 2-3 specific activities or resources per week (free ones preferred)
- One milestone I can check off at the end of each week to know I'm actually making progress

SEE IT IN ACTION

Someone wants to learn basic video editing.

Filled in: 'I want to learn basic video editing. Three hours per week. I want to edit a 2-minute highlight video from my phone footage.' Claude returned this four-week plan:

CLAUDE'S RESPONSE

Week 1 — Understand the basics

Goal: Get comfortable with the interface and make your first edit.

Activities: Download CapCut (free). Watch one 15-minute intro video.

Edit one 30-second clip from your camera roll.

Milestone: You've exported one short video.

Week 2 — Cuts and transitions

Goal: Make your edits feel intentional, not choppy.

Activities: Practice jump cuts and match cuts. Try 3 transitions.

Milestone: A 60-second clip that flows naturally.

Week 3 — Music and text

Goal: Add a soundtrack and on-screen text overlays.

Activities: Use royalty-free music from Pixabay. Add 3 text overlays.

Milestone: A clip with music synced to the key moments.

Week 4 — Complete the highlight video

Goal: Edit your full 2-minute video start to finish.

Milestone: Export and watch it. It's done.

YOUR TURN

Pick the thing you've been meaning to learn.

You know what it is. The skill you've had on your list for a year. Give Claude five minutes this week. Fill in the prompt. Get the plan. Then do Week 1 — not all four weeks, just Week 1.

- Be specific about your outcome. 'Learn Spanish' is too broad. 'Hold a five-minute conversation about my job' is a plan.
- Ask Claude to adjust. After you see the plan, say: 'I only have 90 minutes a week — simplify each week to one activity.'
- Use the milestones. If you can't check off the Week 1 milestone, don't move to Week 2. That's the whole point.
- Run it again at the end of four weeks. Pick your next skill. This is how a learning habit actually builds.
