

# Build Your Own Quiz with Claude

---

Testing yourself is the fastest way to learn. Claude makes it effortless.

*"Re-reading your notes feels productive. It isn't. This is."*

---

*THE PROBLEM*

---

## You've been studying the wrong way.

There's a technique called retrieval practice. Decades of research back it up. The core idea: you learn faster and remember longer when you pull information out of your brain — not when you push more information in.

Re-reading your textbook? Pushing in. Watching lecture videos again? Pushing in. Highlighting in three colors? Still pushing in.

The most effective study method is testing yourself. Flashcards. Practice questions. Closing the book and trying to write down everything you remember. This is retrieval — and it works because the act of struggling to remember is what makes memories stick.

The catch: making a good quiz takes time most students don't have. You'd need to write the questions, vary the formats, and check that the answers are actually correct. Claude does all of this in seconds — and it doesn't just quiz you. It teaches as it goes, explaining every answer whether you got it right or wrong.

This kit shows you exactly how to turn Claude into your personal tutor for any subject, any time.

---

THE PROMPT

---

## Your Template

Use this prompt before any test, exam, or study session. Fill in your topic, then let Claude run the quiz interactively — one question at a time, waiting for your answer before it moves on.

**PROMPT**

I'm studying [topic or subject] and I want to quiz myself.

Please create a 10-question quiz for me. Mix up the formats:

- Some multiple choice (4 options)
- Some short answer
- One question that asks me to explain something in my own words

After I answer each question, tell me if I got it right and explain why – even if I was correct.

Start with question 1 and wait for my answer before moving on.

SEE IT IN ACTION

---

## A biology student studies mitosis.

Topic filled in: 'I'm studying cell division — specifically mitosis — for my biology exam next week.' Claude began the quiz interactively. Here is what the first exchange looked like:

### CLAUDE'S RESPONSE

#### **Claude: Question 1 of 10 (Multiple Choice)**

Which phase of mitosis is characterized by chromosomes lining up along the cell's equator?

A) Prophase B) Metaphase C) Anaphase D) Telophase

#### **Student: B) Metaphase**

**\*\*Claude: Correct!\*\*** During metaphase, chromosomes align at the metaphase plate. This ensures each daughter cell receives exactly one copy of each chromosome — think of it as the checkpoint before division happens. Ready for Question 2?

#### **Claude: Question 2 of 10 (Short Answer)**

What is the role of spindle fibers during mitosis?

#### **Student: They pull the chromosomes apart?**

**Claude: Yes — more precisely, spindle fibers attach to each chromosome at the centromere and pull sister chromatids to opposite poles of the cell during anaphase.**

*YOUR TURN*

---

## Pick your hardest topic. Let Claude quiz you.

Think about what you're studying this week — or the subject you've been avoiding. Open Claude, fill in the prompt, and go through at least five questions before you stop. Notice what you actually know versus what you only think you know. That gap is where the real studying happens.

- Use it before every test. Run the prompt two to three days before the exam, not the night before.
- Ask Claude to go harder. After the first quiz, say: 'Make the next round more difficult — same topic.'
- Use the explanation. If Claude explains an answer you got wrong, ask: 'Can you give me an analogy to help this stick?'
- Quiz yourself across subjects. One prompt per class. Thirty minutes total. Better than two hours of re-reading.
