

Ejoshi

The Ejoshi AI Starter Kit

A calm way to start using AI for
school, life, and learning.

Made for the Ones Who Move Different.

– EJOSHI –

v1.3 · ejoshi.ai

Welcome.

You're not late. You're not behind. You're early — to a kind of skill most schools haven't figured out how to teach yet.

This kit is the calmest, shortest way to start using AI without getting overwhelmed, without falling for hype, and without doing anything you'd be embarrassed to put your name on.

Five pages. No upsell. No tricks.

Who this is for

- Anyone learning AI who wants to be smart about it, not sneaky.
- Parents who want to understand what their kids are actually doing.
- Anyone who's been told they should "learn AI" and doesn't know where to start.

The Ejoshi promise

Always honest. Built for everyone — not just the people who already know.

Why we made this. Ejoshi was named after a family — two sons and the Shi family name. It started as a father's promise that his kids would grow up knowing how to use AI, not be afraid of it. This kit is the first step of that promise, in your hands.

The 3 questions to ask before you use AI for anything.

Before you type a prompt — any prompt — ask yourself these three. They take ten seconds and save you from most of the trouble people get into with AI.

1. What am I trying to learn?

Not what answer you want. What understanding you want by the end. "Solve this problem" is an answer. "Get better at this kind of problem" is learning. AI is good at both — but only if you tell it which.

2. Would I be okay with my teacher (or boss, or kid) seeing this prompt?

If yes, you're probably fine. If you'd want to delete the chat — that's the gut check telling you something.

3. Did I try first?

AI is best when it helps you finish what you started, not when it does what you haven't tried. Five minutes of your own thinking before you ask makes the AI's answer ten times more useful.

That's it. Three questions. They're a habit, not a rule — the more you use them, the less you'll need them.

Five prompts worth knowing.

Copy them, paste them, change the bold parts, see what happens. Don't memorize them — steal the shape and make your own.

1. The Tutor

"I'm working on [topic]. Don't give me the answer. Walk me through what I should be thinking, one step at a time, and stop after each step so I can try it myself."

Turns AI from a vending machine into a study partner.

2. The Editor

"Here's something I wrote: [paste your text]. Don't rewrite it. Tell me: (a) the weakest paragraph and why, (b) where I'm making a claim I didn't back up, (c) one thing I should add. Be honest."

Keeps your voice. Improves your work.

3. The Explainer

"Explain [concept] like I'm new to it. Then give me three real-world examples. Then quiz me on it with three questions."

Better than re-reading the textbook for the fifth time.

4. The Decision Helper

"I'm trying to decide between [option A] and [option B] for [reason]. Don't pick for me. Give me three honest pros and three honest cons of each, and tell me what question I should ask myself to choose."

Use this when you're stuck — homework, college lists, projects, even what to read next.

5. Teach Me the Method

"I keep getting [type of problem] wrong. Teach me the method. Then give me three practice problems to try."

The most underrated prompt in the kit. Use it weekly.

Your first 7 days.

You don't need a "30-day AI challenge." You need a tiny on-ramp. Here's one.

Day 1 — Pick a tool.

ChatGPT, Claude, or Gemini. They're all fine to start. Pick whichever is free for you and stop researching.

Day 2 — Use The Tutor prompt on a real homework problem.

Don't ask for the answer. Walk through it. Notice how it feels different from copying.

Day 3 — Use The Explainer on something you already kind of get.

Pick a topic you'd say you "sort of understand." Ask for the simpler version. See what you actually didn't know.

Day 4 — Use The Editor on something you wrote.

A paragraph from an essay. A text you're nervous about sending. A short-answer. Listen to the feedback. Decide what to take.

Day 5 — Use The Decision Helper for any decision you're stuck on.

Doesn't have to be school. "Should I quit this club" works.

Day 6 — Teach someone else one of the prompts.

Parent, friend, sibling. Teaching is the fastest way to lock something in.

Day 7 — Reflect.

What got easier this week? What did the AI mess up that you caught? That's the skill you're building — noticing when it's wrong is more valuable than getting it right.

After 7 days, you're not an "AI expert." You're something better — you're someone who can use it without losing yourself.

That's what Ejoshi is for.
