

The Family AI Guide

Bring AI into your house - on your terms

The Family AI Guide

How to bring AI into the house - homework, routines, hobbies - without it taking over the dinner table.

Start Here: It Is Already in Your House

AI is not coming - it is already here. Autocorrect, voice assistants, recommendation feeds, spam filters. The question is not whether your family uses AI. It is whether you are using it on purpose.

Three Things AI Is Good At (For Families)

Explaining things patiently

Ask it to explain a homework concept five different ways until one clicks. It never gets tired or frustrated.

Helping you think through decisions

Family budget pressure? Career crossroads? AI can lay out trade-offs and help you organize your thinking - not decide for you.

Getting unstuck on creative projects

A kid with a school project and writer's block. A parent who needs to write a difficult email. AI can be the starting point.

House Rules Worth Having

You do not need a policy document. You need a few clear agreements:

- AI helps you think - it does not think for you. Show your reasoning.
- If AI gave you the answer, say so. Honesty is not optional.
- Check important facts. AI is confident even when it is wrong.
- Homework is about what you learn, not what you produce. Use AI to understand, not to skip understanding.

Conversation Starters for Any Age

With younger learners: 'What do you think AI actually is? Is it smart like a person?'

With older students: 'If you used AI for that assignment, what did you actually learn?'

As a family: 'What is one thing we could use AI for this week that would make life easier?'

One Thing to Try This Week

Pick one moment - a homework question your child is stuck on, a dinner-table debate no one can settle, a recipe idea - and try using an AI tool together. Talk about whether the answer was good. That conversation is the lesson.

>> FAMILY PROMPT TO TRY

'We are trying to plan a [weekend trip / birthday party / family project]. Here is what we are working with: [your situation]. Give us 3 ideas that fit our budget and the ages of our kids.'
