

The One-Person Workflow

Do the work of a small team - as one person

The One-Person Workflow

A practical template for small operators - how to use AI to do the work of a small team, honestly.

The Honest Truth About Solo Business

Running something alone means context-switching 40 times a day. Writing, replying, planning, creating, following up. AI does not change what you need to do - it changes how much of it you can actually get done.

The 5 Roles AI Can Play in Your Business

First-draft writer

Client proposals, social captions, email templates, product descriptions. Give it context and constraints. Edit what it gives you.

Research assistant

Market sizing, competitor summaries, topic overviews. Verify everything - it is a starting point, not a source.

Thinking partner

Talk through a decision out loud in text. Ask it to challenge your assumptions or identify what you might be missing.

Template machine

Build one great template once. Ask AI to produce variations adapted for different clients, audiences, or contexts.

Client communications

Difficult emails, follow-ups, boundary-setting messages. Describe the situation, let it draft, send what feels right to you.

The Weekly AI Rhythm

Monday morning (20 min): Paste your week's priorities into AI. Ask: 'What am I not accounting for? What is the highest-leverage use of my time this week?' Use it to think - not to follow blindly.

Daily writing (as needed): First drafts always go to AI. 'Write a [type of message] to [audience] about [topic]. Tone: [describe your voice]. Keep it under [length].' Then edit to sound like you.

Friday review (15 min): Ask AI to help you write a one-paragraph summary of what you shipped this week. Copy it into a running log. You will want this for newsletters, reports, and case studies.

The Template You Will Use Every Week

>> WEEKLY FIRST-DRAFT PROMPT

Context: I am a [your role] who helps [your clients] with [what you do]. My voice is [describe: direct / warm / technical / conversational]. Task: Write a [email / caption / proposal / update] to [audience] about [topic]. The goal is [desired outcome]. Keep it under [word count]. No jargon.

Save this prompt. Customize the context block once. Reuse the structure every time.

What AI Cannot Do For You

It cannot build your relationships. It cannot develop your taste. It cannot make the judgment calls that come from knowing your specific clients, your industry's unwritten rules, and your own values. The job is not to replace your thinking - it is to clear the table so your thinking has room to show up.
